A classical theory of gravitation in flat space-time (GFST) is given. For weak gravitational fields the results of (GFST) and of general relativity (GR) agree to some order of approximations but for strong fields are differences.

(GFST) gives non-singular cosmological models. The universe contracts to a positive minimum and then it expands, i.e. no BIG BANG.

(GFST) is formally similar to (GR):

$$D_j^i - \frac{1}{2} \delta_j^i D_\kappa^\kappa = 4\kappa T_j^i$$
