## **Preface**

During the past decade advances in functionalization chemistry have been one of the driving forces in the development of new classes of novel nanomaterials for applications in biology and medicine. Despite the impressive scientific efforts towards the development of novel nanomediated therapies, at the current time there is a tremendous need for standardizing cellular and molecular protocols used in Nanomedicine. To our best knowledge this is the first attempt to gather in a single book the most common molecular techniques used in Nanomedicine. Since Nanomedicine field is expanding and becomes part of the curricula in many universities, the present book with protocols will be extremely useful for the researchers, students and medical doctors.

# Contents

Preface .....	III
Chapter 1 Experimental Nanophotothermolysis of Human Pancreatic Cancer Cells Using Gold Nanoparticles .....	1
Chapter 2 Nanotherapeutic Strategies for the Selective Ablation of Human Liver Cancer Cells .....	17
Chapter 3 Development of an in Vitro Anticancer Vaccine Platform Using Gold Nanoparticles Immunoconjugates .....	41
Chapter 4 Techniques Used for Cytotoxicity Evaluation of Nanoparticles .....	69
Chapter 5 Spectroscopic Techniques Used in Nanomedicine .....	93
Chapter 6 Hybridization Techniques in Nanotechnology- Present State and Future Trends .....	117
Chapter 7 Gold Nanoparticles for Multimodal Imaging in Nanomedicine .....	137
